SUMMARY

Software engineer with 9+ years of experience across Node.js, NestJS, TypeScript, and React. Comfortable owning backend services, PostgreSQL schemas, API design, and frontend work within the same project. Recent work centered on multi-brand platforms, microfrontends, and large Next.js codebases, often as team lead for groups of 4 to 8 engineers. Focused on hands-on development, clean code, and reliable shipping.

SKILLS

- **Languages & Frameworks:** TypeScript, JavaScript, Node.js, NestJS, Express.js, React, Next.js, Preact, Astro
- **Back-End & Databases:** PostgreSQL, MySQL, MongoDB, RESTful APIs, GraphQL, OpenAPI, BFF, Contentful
- **Tools & DevOps:** Docker, AWS, CI/CD, Sentry, Prometheus, Grafana, RabbitMQ, Kafka
- **Testing:** Vitest, Jest, React Testing Library, Playwright
- **Front-End:** HTML, CSS, SASS, Tailwind CSS, Redux, Shadcn/UI, Radix UI, Storybook

EXPERIENCE

X-DEV | Remote

Lead Software Engineer | Feb 2026 - Present

- Own backend and frontend architecture for current projects, writing NestJS services, managing PostgreSQL databases, and building React/Next.js applications.
- Designed REST and GraphQL APIs with clear data contracts, lowering latency and streamlining client-side integration.
- Built a shared component library that reduced feature implementation time across the team.
- Introduced automated testing requirements and linting rules, significantly reducing production regressions.

EPAM Systems | Remote

Lead Software Engineer | Aug 2022 - Feb 2026

- Led teams of 4 to 8 engineers on client projects in retail, finance, travel, and energy, while

- staying hands-on with code reviews, API integrations, and debugging across the stack.
- Set up a monorepo for a UAE group with seven brands, so the brand sites shared one component base instead of rebuilding the same UI. Proposed Next.js ISR for their pages, which let editors publish changes from the CMS without waiting for a full redeploy.
- Integrated a third-party checkout and payments system into the same group's websites.
- Led a team of 7 through the migration of an international financial organization's legacy React app to Next.js.
- Built a microfrontend setup for a travel company: five Preact apps loaded through Module Federation, Shadow DOM for style isolation, and an Express.js backend. Proposed Context instead of Redux for shared state to keep the bundles light.
- Ran technical interviews for the projects I led and hosted internal workshops for engineers on productivity practices.

Senior Software Engineer | *Dec 2021 - Aug 2022*

- Worked on client projects in food service, telecom, and energy market data, usually owning features from setup to production release.
- Contributed to a single Next.js codebase behind four US fast-food brand sites. Built the per-brand theming and the feature flag system used to turn functionality on or off for each brand.
- Wrote a Backend-for-Frontend (BFF) service in Express.js that combined data from several domain services into one response for the frontend, with TypeScript types generated from OpenAPI specs.
- For a Dutch telecom operator, built features on both sides of a Next.js frontend and NestJS backend.
- Reduced bundle size and optimized API data payload handling to improve performance scores.

Software Engineer | *Nov 2020 - Dec 2021*

- Built reusable, component-based UIs in React and Redux.
- Worked closely with designers to turn Figma mockups into responsive, production-ready components.

SoftConstruct | **Yerevan, Armenia** | **Hybrid**

Software Engineer | *Jun 2020 - Nov 2020*

- Refactored core React components in the CRM for the company's betting platform, fixing performance issues in real-time data updates.
- Improved UI responsiveness in high-traffic admin views used by internal ops daily.

JoinToHire.com | **Yerevan, Armenia** | **Hybrid**

Web Developer | *Apr 2019 - Jun 2020*

- Built and maintained web apps in React.
- Set up Node.js and MongoDB backend services on a small team, working closely with the one backend dev to keep things in sync.

Global Solution | **Yerevan, Armenia** | **Onsite**

Front-End Developer | *Feb 2017 - Mar 2019*

- Developed a government document management system and a dental clinic CRM in React.
- Delivered responsive landing pages meeting accessibility standards, mostly working solo.

EDUCATION

- **BeeOnCode:** Web Development and Design Courses, 2017
- **European University of Armenia:** Bachelor's Degree in International Relations, 2011-2015

LANGUAGES

- **English:** C1 (Advanced)
- **Armenian:** Native
- **Russian:** C2 (Fluent)
